

STUDY COMMITTEE D2 POSTER SESSION: WEDNESDAY 26 AUGUST, 08:30 TO 10:30

ROOM 1

Paper ID	Poster ID	Title	Screen number
D2 PS1 - Extracting value from information and data through decision support tools and techniques in managing the increasing complexity of power grids			
10112	12766	NWPsolarNet: A Scalable Deep Learning Framework for Medium-Term Solar Forecasting across Europe	1
10156	14033	Collaborative Forecasting Platform: Results after one year of operation for wind and solar forecasting in Belgium	2
10524	13756	ANN-Based Day-Ahead Forecasting Model for All-India Demand	3
10525	13100	ISTS Communication system for cross border links in Indian Power Sector	4
10526	13486	Real-Time Time Synchronization Monitoring System for IEDs in Power System	5
11227	13096	Deployment of an Intelligent Robotic Diagnostic System for Outdoor Switchgear Equipment Based on Multispectral Analysis and AI	6
11230	13494	Application of AI (ML) Tools for Model Validation and Anomaly Detection	7
11231	13983	Synchrophasor data reliability monitoring in power system operational mode analysis	8
11232	13950	AI-Based System for Automated Digitalization of Relay Protection Settings Forms	9
11235	13736	The Accuracy of Renewable Energy Generation Forecasting in Energy Systems: Quality Improvement Practices	10
11239	13746	Leveraging AI to identify the root causes of PMU data latency and loss for control room	11
11240	13917	Use Cases of Digital Models and Digital Twins in Power Supply Systems of Large Consumers	12
11402	13899	AI-Applications in Power Systems: the Role of Structured Data and the Acceleration of Legacy Data Structuring Through Artificial Intelligence	13
11642	13446	Renewable Energy Forecasting with Deep Learning Tools	14
11682	12924	Performance comparison of various regression models in geothermal power plant net power generation prediction	15
11774	13702	AI-enhanced generation- and load forecasting in isolated power systems	16
11888	12687	Application of Deep Neural Networks for Fault Detection in Modern Power Systems	17
11964	13823	Leveraging meter load data to build a bottom-up spatial load forecasting	18
11988	14076	A Standardized Data Environment for Decision-Making in Complex Power Grids	19
12098	14112	Unlocking the full potential of data historians across the modern power grid: from generation to delivery	20
12146	13937	Transforming Information Management: Data Governance in the Operator and Administrator of the Wholesale Energy Market in Colombia	21
12200	14122	Real-Time Flexibility Analysis and Visualization of Power Systems Using IoT and Augmented Reality	22
12402	13476	Analysis and Modelling of Powerline Communication Data for Low Voltage Cable Asset and Condition Management	23

12403	13033	Evolution of Interacting Digital Twins for High Voltage Switchgear Monitoring	24
12546	13701	Proving the Concept of Supervised Machine Learning to predict Largest Single Infeed – a Study of Ireland’s All Island System	25
12614	13417	From documents to knowledge graphs: Intelligent requirements management using CIM-based ontology	26
D2 PS2 - Comprehensive approaches to managing cybersecurity in energy applications			
10116	12964	Cyber Sentinels: Harnessing Deep Packet Inspection for Real-Time Defense of Substation	27
10223	13358	System-level Factors influencing AGC Cyber-attack Success and RAS Vulnerability in Multi-area Grids	28
10309	13960	Cyber Security of Digital Substations: Cyber Threats Identification and Mitigations Evaluation	29
10665	12651	Study of Cybersecurity in Power Automation: Implementation Challenges of IEC 62351 for IEC 61850 Systems	30
10667	12928	DigiTEL CyberTwin: Integrating Digital Twin and Cybersecurity for Enhanced Situational Awareness in Critical Electrical Substations	31
10677	14131	Cybersecurity Design Considerations for Offshore Wind Energy Facilities Based on IEC 62443	32
10883	13503	AI-Enabled Fault Detection and Cyberattack Differentiations Using ICS Kill Chain	33
11145	12653	Cybersecurity and EV Charging: Protecting the Future of e-Mobility	34
11176	13000	Modified Purdue Model: Introducing The Security Zone Concept for Enhanced IT/OT Convergence	35
11252	13537	Cybersecurity for Modern Digital Grids	36
11276	13489	Dedicated operational technology security operations centre (OT SOC) “A specialized approach to monitoring, threat detection, and incident response tailored to OT environments”	37
11403	14125	Cybersecurity Governance and Performance Evaluation in the Largest Special Protection Scheme in Brazil: A Real-World IEC 61850-Based Multi-Company Architecture	38
11405	12660	Application of Artificial Intelligence for Real-Time Intrusion and Anomaly Detection in Industrial Control Systems	39
11435	12733	SASMaker: Synthetic IEC 61850 Traffic Generation for Cybersecurity Research	40
11575	14207	An adaptive Cybersecurity Vulnerability Assessment Method for Power Systems using Knowledge graphs and Fuzzy Logic	41
11643	12737	Automating IEC62443-4-2 Conformity Assessment for Substation control systems: raising Cybersecurity to the Next Level	42
11779	13500	A Standards-Based Cybersecurity Framework for Substation Automation Design: Applying IEC 61850, 62351, 62443, and Lessons Learned from Real-World Events	43
11801	13502	Designing SCADA architectures for scalability, cybersecurity and digital resilience	44
11957	14049	Operational Integration and Customization of a SIEM System in ANDE's OT Network	45
11958	14052	Modernizing the ANDE SCADA Control Center Infrastructure with HCI and SDN: A Strategy for Resilience and Cybersecurity in OT Environments	46
11969	13985	Securing grid connectivity with quantum-safe IPsec	47
12100	14113	Enhancing IEC 60870-5-104 Security Over TCP/IP With IEC 62351 and An AI-based Intrusion Detection Model: Application and Transport Layer Security	48
12133	13887	Protecting Critical Power Infrastructure: A Cybersecurity Architecture for Electric Grid Protection Systems	49

12215	14143	Mitigating Cyberattack Risks in Digital Substations Using a Cybersecurity Model	50
12386	12866	Stress Testing Power Systems' systemic Resilience against Cyber-Attacks	51
12461	13892	Towards Trustworthy Artificial Intelligence in Grid Control	52
12533	13695	Experience Implementing IEC 62443 Cybersecurity Requirements in Hybrid Battery/Solar Power Plants	53
12642	14056	A Room-Temperature Quantum-Secured ROCOF for Enhancing Grid Reliability	54

ROOM 2

Paper ID	Poster ID	Title	Screen number
D2 PS3 - Next-generation telecommunications technologies to support grid decarbonisation and digitalisation			
10333	13843	Segment routing for differential protection: transport network evolution and field validation for C37.94 applications in high power substations	1
10349	12893	A proven & optimized approach to Network Transformation of legacy networks to next generation technologies	2
10401	14127	Field Deployment of Hybrid Microwave Technology for DSO in Queensland for Transporting Mission Critical Tele-protection and SCADA services through lab testing	3
10486	13897	The Importance of Automation Systems in the Electrical Interconnection between Brazil, Paraguay, and Argentina: Challenges and Perspectives	4
10543	13612	Transition to Packet Networks	5
10544	12719	Implementation of OSTP Amplifier solution with ROPA Technology and its Operational experiences	6
10545	13846	Unified Network Management System (UNMS) for Power System Communication Network: A Roadmap for Future Grid Communication Management	7
10547	13407	Migration Strategy from TDM to IP/MPLS in Utilities: A Roadmap and Lessons Learnt	8
10549	12865	Packet-Based Power: Enabling Grid Decarbonisation through Next-Generation Telecommunications	9
10550	13600	Automation and artificial intelligence by OT network operations center in power utility	10
10885	14080	Supporting Routed GOOSE (R-GOOSE) Traffic over IP/MPLS Using Multicast VPNs	11
10933	14213	Private LTE 450 MHz wireless network for MV Teleprotection	12
10934	14177	Enhancing Resilience in Critical Applications through hybrid Optical and PLTE Networks	13
10935	12713	Use of co-simulation for zonal congestion management systems to assess the resiliency of the associated ICT infrastructure	14
11003	13441	Evaluating transmission performance for migration from SDH/PDH networks to MPLS-TP and IP networks	15
11004	13132	Field Evaluation of diverse Communication Methods for supporting smart Maintenance in remote hydroelectric Power Facilities	16
11005	13529	Application of All-Photonics Network (APN) for Power Communication	17

11006	13347	Migration To The Next-Gen Packet-Based Transport Network: Enabling IP-Based Power Control Applications of Tomorrow	18
11007	12962	Realisation of a resilient Packet-based Network over Wireless Microwave Technology	19
11008	13585	Case Study of Legacy Communication Migration to IP Networks in Japan	20
11009	13074	Measurement of PTP Synchronization Accuracy and Study of its Application to IP Networks of Japanese TSOs	21
11010	12901	An Example of Building and Using a Smart Safety Network Using Private 5G/Wi-Fi	22
11047	14205	Deployment of multipoint grid control applications over mixed communication networks using protection signalling devices.	23
11168	14214	Hybrid OSS Framework for Utility Telecommunications	24
11177	14042	Optimising IP based SCADA IEC 60870-5-104 Protocol Performance Through Adaptive Machine Learning Driven Traffic Shaping in Classical Computing Environment	25
11234	13749	Transition to SCADA/EMS Cloud Architecture in Big Power Systems in the Light of Present-Day Challenges and Cybersecurity Requirements	26
11275	13839	Line differential protection over packet-switched network: performance and considerations in South Africa	27
11343	12650	5G-Enabled Smart Grid IoT: Architecture, Use Cases, Challenges & Solutions	28
11378	12702	Benchmarking Line Differential Protection under Emerging Communication Infrastructures	29
11379	13940	Pilot project: Line Differential Protection over Ethernet	30
11394	12888	Upgrading Argentina's 500 kV Transmission Network: From Legacy SDH Microwave to Hybrid TDM/Packet Systems for Enhanced Reliability	31
11406	13941	IEC61850 based PACS network automation enabled via Intent-Based Networking	32
11436	12695	Protection Automation and Control using private 5G: Use-case Evaluations for fully digital Substations	33
11576	13079	Research on passive and semi-passive P-IoT sensing for UHV equipment monitoring based on energy harvesting and low-power wireless communication	34
11577	13369	Research and Deployment of IPv6+ and SDN Technologies for Smart Grid Data Networks	35
11644	13939	Implementation and Deployment of Multiprotocol Services into a MPLS Critical Infrastructure Network	36
11645	13254	Real-Time IDS for Digital Substations: From Lab to Field Deployment	37
11852	13153	A Universal Gateway for IoT-Driven Power Infrastructure for SCADA Integration	38
12026	12721	Protection relays using 5G for inter-substation communication to enhance selectivity	39
12208	13955	Real-life case of Routable-GOOSE over MPLS-TP: Implementation, Testing and Validation at Tele-protection Santa Rosa-Carapongo 220 kV line in Perú	40
12340	13202	Field Experience Report of using Process Bus over Substation Boundaries with multi-vendor line differential Protection	41
12341	13608	Field experience report of hybrid distance protection solution using IEC 61850 GOOSE gateway	42
12344	14155	Precise Time Synchronization for mission critical inter-substation Applications in a multi-vendor Setup	43
